

DUALVIEW ULTRA CLEAR

DualView Ultra Clear Projection Film is the perfect product for projects that need to truly captivate. The highly transparent design features of the Ultra Clear projection film are compatible with standard projectors and require no specific projection angle. DualView Ultra Clear Projection Film can be used for both rear and front projection installations. It is the same transparency as glass so that your image will appear to be truly floating. Pulling the release layer off the back of your film exposes the built-in, hi-tac adhesives that will keep it attached to your glass or acrylic surface for years to come.
